Flexible CystoNephroscope

# FlexVision™ C-8

## On the Inside Tract

### Visual Genius

The Stryker enhanced resolution fiberoptic flexible cystonephroscope, the FlexVision™ C-8, provide surgeons an outstanding diagnostic and therapeutic tool to perform their daily urological procedures. The high density fiber bundle provides an enhanced resolution picture not seen in a fiberoptic scope. The 180° deflection both ways allows mapping of the entire bladder and enhanced treatment with flexible instrumentation. The beveled SuperSlim tip and shaft (5.2mm in diameter) ensure easy urethra and prostate navigation leading to greater patient comfort.

Merging the matchless clarity of the FlexVision™ C-8 with the standard-setting Stryker High Definition camera will provide an unrivaled visual image in the office and operating room. Urologists will find the Stryker flexible cystoscope an exceptional and easy-to-use tool by which to perform their most common procedures.

### Intuitive Design

The lightweight and ergonomic form of the FlexVision™ C-8 makes ureteroscopies simpler and more comfortable. Combining smooth deflection buttons with a sleek handle offers a firm, dependable grip during procedures.

### Matchless Clarity

Detailed brightness in the smallest spaces enhances visibility and increases performance during procedures. By joining the forces of the FlexVision™ C-8 with the Stryker Camera System, a surgeon is equipped with the finest tools available to complete complex operations.

### FlexVision™ C-8 Features

- » High density fiber bundle for enhanced resolution and picture quality.
- » Beveled SuperSlim tip and shaft (5.2mm diameter) for easy urethra and prostate navigation.
- » Standard flow working channel (2.2mm) for consistent, enhanced flow even with an instrument.
- » 6 o'clock working channel position for optimal instrument positioning and visualization.
- » Thumb control 180° Up/Down responsive deflection for optimal bladder diagnosis and treatment.

### Superior Deflection

Optimal accessibility is provided in the bladder through primary deflection.
